Nikhil Nair

Senior Software Engineer at Cognitree
Bengaluru, Karnataka, India

Summary

For those from the year 2050 with chips in their brain: I'm your analog human, built of flesh & bones.

With flesh & bones, I've navigated the tech landscape in a nearly decade-long journey, engineering products that connect devices—and sometimes even the people using them. My adventures include exploring the wilderness that is early-stage startup, nurturing ideas in the venture capital savannah, and scaling the highlands in a Series A-funded space vehicle. When those 70-hour marathons began catching up, I traded my boots for a stride down the urban sprawl of consulting.

Currently spending my time with the fantastic team at Cognitree, learning in heaps as we architect distributed realities.

Looking forward to connecting with fellow, inquisitive minds.

P.S - Don't fret over the tone of this bio; it's my attempt at creative writing. Besides, my humor may be dry, but my passion for conversations & learning is unmistakably genuine.

Experience

Cognitree

Senior Software Engineer

February 2025 - Present (8 months)

GUVI Geek Networks, IITM Research Park

Mentor

April 2024 - Present (1 year 6 months)

Exploring my passion for teaching and sharing my knowledge in software engineering

Currently teaching the full stack web development course at GUVI

Sabari Marketing Inc.,

Technical Lead

July 2022 - January 2025 (2 years 7 months)

Remote

Charged with delivery of two critical projects, traceability and data ingestion platforms, leading teams of 3-10

Streamlined release cycles from three months to two weeks by implementing agile methodologies, enhancing product efficiency and delivery speed of the traceability project

Boosted performance in key frontend modules by up to 6x; re-architected the Python backend for local development, removing AWS AppSync dependency, enhancing developer productivity

Developed and deployed a React & Node.js application for data ingestion on GCP's BigTable & Storage services, eliminating manual intervention and reducing the client onboarding process from a week to one day

Vamstar

Senior Software Engineer - Product Engineering

July 2021 - June 2022 (1 year)

Led a 12-member Product team, mentored junior engineers and conducted code & design document reviews

Primary contributor to MEAT, a critical feature allowing users to run simulations before submitting a tender, and its four releases; instrumental in raising the Series A round of USD 7.9 million

Enhanced visibility of sales, expenditures & value generation for the CXOs with a role-based dashboard

Interviewed candidates and improved the onboarding experience to reduce turnover rate in my team by half

Supersub

1 year 5 months

Chief Technology Officer

July 2020 - July 2021 (1 year 1 month)

Bengaluru, Karnataka, India

Acquired

Led the technology initiative, built the backend and collaborated with the content team as we acquired our initial 50,000 users

Established the vision, mission & product roadmaps in conjunction with the CEO en route to the first round of fundraising

Architected & scaled the micro-services, managed data via Mongo Atlas, and ensured backwards compatibility for each iteration

Successfully employed agile methodology to achieve timely releases while training the team on task management and best practices

Heavily involved in the first phase of content creation, from pre-production to release. Eventually created over 150 training videos for the content library

Senior Software Engineer

March 2020 - July 2020 (5 months)

Bengaluru, Karnataka, India

Architected and built the backend APIs for Supersub's first major release

Laid the foundation for security & scaling using Amazon Web Services, employed a micro-service architecture for the API layer and created the database using MongoDB

KloveChef (by IOK Labs Inc)

Software/Voice Developer

July 2018 - March 2020 (1 year 9 months)

Bengaluru Area, India

Contributed to Klove Chefs' Alexa skill, primarily developing modules for user feedback and enabling multimodal experiences. Leveraged Amazon Web Services (primarily Lambda, Elastic Compute, Elastic Beanstalk, and DynamoDB) in order to handle the backend processes

Architected a web scraping library, to create an ETL pipeline to for a million plus recipes across 30+ sources; made it accessible to internal teams via REST, improving predictive models and recipe discovery for user

Designed and developed a web application, RecipeBox, analogous to New York Times's Recipe Box

Developed and deployed native iOS and Android apps using React-Native

Developed the reports module enabling managers to oversee the intra-organization level activity

Adhered to company code standards, participating in regular code reviews & discussions to further reduce development inefficiencies

SVAM International Inc.

2 years 9 months

Software Engineer

September 2015 - May 2018 (2 years 9 months)

Greater New York City Area

SVAM is a consulting & solutions firm located in Great Neck, NY, building products & providing talent to various clients nationally. Starting as an Associate Developer, I worked on projects both at SVAM and their clients, including the NYC Human Resources Administration (NYC HRA) as a Software Developer and Deutsche Bank as a Java EE Developer.

Details on projects below.

Software Engineer (consultant at Scala Computing - an seed funded NYC based startup)

February 2018 - April 2018 (3 months)

New York, New York, United States

Designed, developed and deployed a responsive file system manager for Scala's web application, giving them an edge over an industry competitor

Leveraged Scala's in-house REST APIs, to ensure the user actions on the web based file system was reflected on the the AWS Elastic File System mount

Software Development Engineer (consultant at NYC Human Resource Administration)

April 2017 - January 2018 (10 months)

Brooklyn, New York, United States

Part of the team at HRA that re-engineered a legacy PowerBuilder application using VB.NET, along with front-end technologies (Razor/HTML/CSS/JS, Bootstrap & JQuery) and Oracle for backend

Responsible for a module to effectively evaluate application submissions for Cash Assistance programs by eliminating intervention from legacy system

Improved performance by over 50% in the new module, using asynchronous communication

Presented proof of concepts of version control systems including Git & Team Foundation Server (TFS) to database developers, eventually settling on TFS

Software Engineer (Internal project)

January 2017 - April 2017 (4 months)

Great Neck, NY

Using an agile approach, co-designed (w/ the project manager) an Amazon Alexa Skill as a proof of concept, developed (in Java) and deployed the skill to Amazon Web Services Lambda, improving ease of use of form submissions

Presented the completed skill to key individuals at SVAM Int'l, in healthcare industry & a government organization

Java EE Developer (consultant at Deutsche Bank)

August 2016 - December 2016 (5 months)

Jersey City, New Jersey, United States

Redesigned and developed a middle tier application at Deutsche Bank to verify transactions against a list of embargo

Built the middle tier in Java EE, in addition to Java Messaging Services and posted the response from the JMS queue to a REST web service. Deployed the application to an IBM Websphere application server after building a war file using Maven

Took an agile approach in collaborating with the VP of IT, project manager & business analyst to complete the application development, testing and release within twelve weeks

Software Engineer - Associate (Internal projects)

September 2015 - August 2016 (1 year)

Great Neck, NY

Collaborated on the development of a hybrid application, initially targeting Android. Built three responsive tabs as a part of the UI development & SOAP services to handle user interactions

Extended & improved functionalities of internal testing libraries in Selenium to improve automation testing of web based projects

Conversed with the managing director to understand, build & present a responsive prototype of the company website using pure web technologies (HTML/CSS/JS), Bootstrap & JQuery

Sabari Marketing Inc.,
Associate Web Developer
June 2014 - August 2014 (3 months)
Hicksville, NY

Developed responsive websites primarily for non-profit organizations, hosted using an all-in-one tool, Adobe Business Catalyst

Assisted in composing proposals, translating to two new projects and communicated with clients to ensure completion of tasks in a timely manner

Education

Stony Brook University
Bachelor of Science (BS), Computer Science · (2013 - 2015)

Nassau Community College
Associate's degree, Computer Science · (2011 - 2013)
